

(Circa. 2016)

I have been a computer programmer since early 1983. I cut my teeth on the Atari 400 Personal Computer before moving on to IBM-PC compatible computers. My first ever programming language was BASIC. I have a degree in electronics engineering although programming is my first love. I have used many different programming languages and operating systems throughout the course of my career. I currently write .Net software for a large corporation. After a long day of writing .Net code I find it quite refreshing to come home and work with Liberty BASIC.

Check these out:

[Random Access File Maker II](#) - Create and use random access data files in your LB programs.

[Text Adventure Engine](#) - Make your own text adventure games of the verb/noun type.
