

This picture just about tells the story of my day job and my hobby. In the background is a B777-300ER which I fly for a living,. Although as I am now partially retired, I spend most of my time as a Flight Examiner in the Simulator of the the same aircraft type. In the foreground is my little Titan T51 Mustang 75% scale replica, which has taken the last 5 years to build from a kit. The B777 is powered by 2 x 115,000lb thrust GE turbofans, the T51 BY A 100hp Rotax.
More of my aircraft and construction photos are here : [Ken's Toys](#)

So now onto the code

Here is the link to Route Planner and Display
