

Can I write a web browser in Liberty BASIC?

Yes, you can. It requires an additional DLL, or a lot of code to do the parsing and rendering. There are two free DLLs available that allow you to embed a browser control in your programs.

- [LBBrowse.DLL from Alyce's Restaurant](#)
- [Issue #110 of the Liberty BASIC Newsletter](#) contains info about Doyle Wisenant's port of the BCX browser DLL to Liberty BASIC Syntax. The browser DLL and sample are here:

Can I open a webpage without a browser DLL?

Yes. You can also call up a webpage using the RUN command. The following code will open the user's default browser to the Liberty BASIC homepage.

```
run "explorer http://www.libertybasic.com/"
```
